Haemonetics Announces European Expansion for VASCADE® Vascular Closure System

August 29, 2023

BOSTON, Aug. 29, 2023 /PRNewswire/ -- Haemonetics Corporation (NYSE: HAE), a global medical technology company focused on delivering innovative medical solutions to drive better patient outcomes, has announced that for the first time, patients have been treated with the company's VASCADE MVP® Venous Vascular Closure system in Germany. This marks the first use of the VASCADE system portfolio, widely used in U.S. hospitals, in a European country.

HAEMONETICS®

The VASCADE system is designed for "small-bore" femoral arterial and venous closure, generally used in interventional cardiology and peripheral vascular procedures. The VASCADE MVP system is designed for "mid-bore" multi-access femoral venous closure, generally used in electrophysiology procedures. Both closure devices are CE marked under the EU-MDR (European Medical Device Regulations) for use in patients who have undergone catheter-based procedures with single or multiple access sites in one or both limbs and include proprietary collapsible disc technology and a resorbable collagen patch to achieve hemostasis. The VASCADE and VASCADE MVP systems are designed to save time for hospital staff, while helping patients reach hemostasis faster with fewer complications on average compared to manual compression.

"First and foremost, the VASCADE MVP system helps promote patient wellbeing. There is a very short post-procedural bedrest, which can reduce back pain and the need for urinary catheters and create the possibility for same-day discharge. From a handling perspective, the VASCADE MVP device is logical to operate and has smooth control. During the product evaluation, we achieved hemostasis in the EP lab without the need of any further compressive bandages," said Dr. Bogdan Muntean, Senior Physician of Cardiology and Medical Director of Electrophysiology at [The Jewish Hospital](#) in Berlin.

Haemonetics is planning further expansion for the VASCADE system portfolio in other markets outside the U.S. Following the German launch, the VASCADE systems have now been released for use in Italy. Haemonetics recently announced the distribution of the VASCADE MVP system in Japan via an exclusive agreement with Japan Lifeline Co. Ltd. The product is expected to launch in Japan later this year.

"International commercialization of our VASCADE portfolio represents an exciting milestone for our vascular closure business, reinforcing our industry leadership in improving hospital operations and raising standards of care for patients," said Stewart Strong, President, Global Hospital at Haemonetics. "We look forward to continuing to expand our presence in global interventional cardiology and electrophysiology markets to meet the ongoing needs of physicians throughout the world."

About Haemonetics

Haemonetics (NYSE: HAE) is a global healthcare company dedicated to providing a suite of innovative medical products and solutions for customers, to help them improve patient care and reduce the cost of healthcare. Our technology addresses important medical markets: blood and plasma component collection, the surgical suite, and hospital transfusion services. Cautionary Statement Regarding Forward-Looking Information

Any statements contained in this press release that do not describe historical facts may constitute forward-looking statements. Forward-looking statements in this press release may include, without limitation, statements regarding plans and objectives of management for the operation of Haemonetics, including statements regarding potential benefits associated with its VASCADE and VASCADE MVP systems and Haemonetics' plans or objectives related to the development and commercialization of these products. Such forward-looking statements are not meant to predict or guarantee actual results, performance, events or circumstances and may not be realized because they are based upon Haemonetics' current projections, plans, objectives, beliefs, expectations, estimates and assumptions and are subject to a number of risks and uncertainties and other influences. Actual results and the timing of certain events and circumstances may differ materially from those described by the forward-looking statements as a result of these risks and uncertainties. Factors that may influence or contribute to the inaccuracy of the forward-looking statements or cause actual results to differ materially from expected or desired results may include, without limitation, product quality and performance; market acceptance; the effect of global economic and political conditions; the impact of inflationary pressures in the company's global manufacturing and supply chain; and the impact of competitive products and pricing. These and other factors are identified and described in more detail in Haemonetics' periodic reports and other filings with the U.S. Securities and Exchange Commission. Haemonetics does not undertake to update these forward-looking statements.
